

Diagnostic Wax-Up Checklist

To create an esthetically pleasing outcome requires establishing the position of the teeth through careful consideration of proper function and all esthetic parts.

To achieve the best results for you and your patient, please provide us with the following items when requesting a diagnostic wax-up:

- ✓ High precision impressions (preferably polyvinyl or polyether material or bubble-free stone models)
- ✓ Facebow or bitefork (taken parallel to the floor with your patient in an upright position)
- ✓ Asthetic photos (as per Silva protocol)
- ✓ Bite registrations (ensuring that CO and CR coincide)
- ✓ Doctor's complete written instructions

If all your information has been received correctly, the in-lab time should be approximately 2 weeks.

We're always available for any questions or case planning.
